

# Company Profile

URMET|GROUP

***Urmet, standing for “Utilizzazione e Recupero del Materiale Elettro-telefonico Torino”.***

*In 1937, the years of autarky in Italy, Turin-based Urmet reconverted the existing telephony park to make it reusable.*

*Since then, Urmet's history has been built up over the decades, through the energy and contributions of numerous people who have made it a complex system.*

*During this long journey Urmet has become one of the pillar of Italian and international design and development of cutting-edge technologies for building communication and automation.*

*This has been achieved, primarily, through valuable resources: **innovation, quality, customer service and integration.***

# Innovation as a guiding principal

INNOVATION

Always at the forefront of the latest technologies, we continue to support and implement innovation and research. For years guaranteeing continuity of choice and offer which is able to respond to the demands of the market with quality products and services.

In our immediate future, we see buildings where digital and sustainable technology contributes to improved living comfort and security for people and their property, where interconnected systems modernise and increase the value of homes.

In order to innovate its products and systems, Urmet invests over six percent of its turnover in R&D.

# Quality can be recognised over time

Urmet is committed to maintaining a long-term relationship with its customers, and therefore, to quality at all costs.

Because of this, its development processes are geared towards obtaining products and systems that guarantee maximum safety and performance.

QUALITY

# Customer satisfaction first of all

This is the value we hold most dear that has illuminated our 85 years of activity and will continue to enlighten our future.

In order to fulfill this objective, we constantly provide support to our customers. In fact, we accompany them at every stage of their project, from designing, to configuring and installing the system. We also provide training to educate and update our customers on our latest technologies and regulatory requirements.

CUSTOMER SERVICE

# Integration: the search for new opportunities

INTEGRATION

Our daily challenge is to integrate our products and systems with third-party products and systems in order to continue to play a leading role in the future interconnected society.

The ability to acquire and implement new products and technologies, with the intention of creating further application opportunities, is a goal we have always pursued.

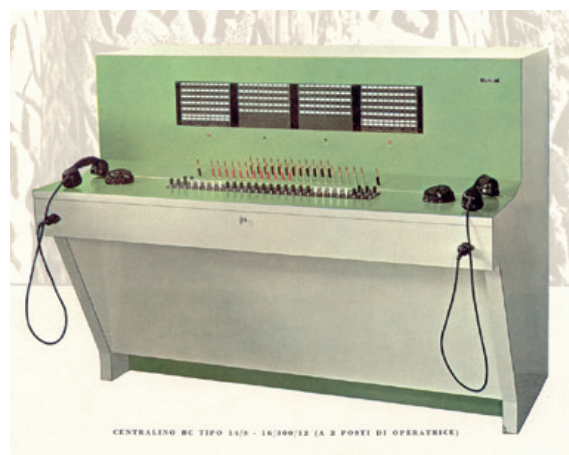

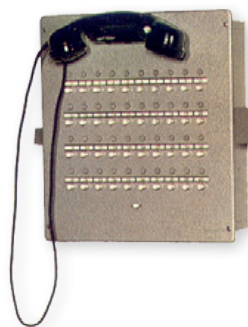

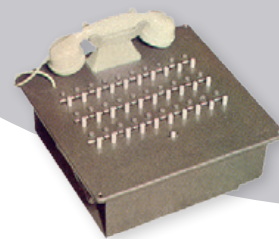

# The stages of our history

On April, 28th Cinecittà was inaugurated in Rome and on December 21st, Walt Disney presented the first full-length animated film in history at the cinema.

# 1937

**Urmet was founded in Turin as an Italian Limited Company for the Utilisation and Recovery of Electro-Telephone Equipment.**

These were the years of autarchy, when Italy had to cope with the economic sanctions following the Ethiopian war. The reconversion, reuse and exploitation of the technology developed up to that point became crucial.

# 1949

**The first Urmet-branded product comes onto the market:** namely the BCA (central battery) telephone. Representing a turning point for the company, it is the first product designed and sold under the brand name in Italy and Argentina.

BCA telephones were introduced in rural communities after 1945, thanks in part to the technological heritage accumulated through the company's previous remanufacturing activities.

# 1958

**Urmet started mass production of door phones and the first Urmet-branded entry panel was born.**

These were the years in which intercom was born, hitherto unknown and little perceived as something needed by society. The method introduced by Urmet to manage the numerous wires that used to arrive on the front of the external entry panel was revolutionary.

The wires of the system reach up to a counter-button inserted on the internal frame case of the entry panel, so that the latter can be disassembled and controlled more easily. Electricians liked the system so much that it became the standard and was adopted by other manufacturers.

**The first Italian video intercom was designed in 1965.**

# 1982

First public telephone for local and long-distance calls. **In 1982, pre-paid magnetic phone cards were patented** Expansion of the group abroad began, with the French company Captiv and the Brazilian firm Daruma. The company's reach was further extended.

With Urmet Domus, **the business focused on building systems and automation**, consolidating the video door phone catalogue. By this point, the video door phone had become synonymous with Urmet, and this effective and user-friendly tool was increasingly present in Italian homes as a symbol of security and convenience.

# 1996

# 2007

On June, 29th, the first iPhone went on sale in the US. On October, 15th, the Airbus A380, the world's largest passenger aircraft capable of carrying 853 people, entered into service.

In the early 2000s, the Urmet catalogue expanded to include **video surveillance**, **intrusion alarm** and **fire alarm** systems.

**In 2007, the offer grew again with the civil series and in 2014 the French company Yokis, specialising in smart home solutions, was acquired.**

Urmet proves, as always, to be in step with the times and the needs of people, who are living increasingly fast-paced lives and have a need for convenient, practical and fast solutions for their homes and their security.

# 2018

Urmet launches on the market **Alpha, the new frameless entry panel** with simple lines and a contemporary style.

A new minimalist and elegant look conferred by the combination of painted steel and black methacrylate. The finishes were designed to ensure high resistance to external agents, with IP66 and IK08 degree of protection.

Alpha's wall-mounted version is the thinnest modular entry panel on the market.

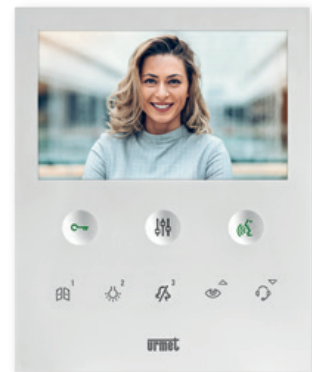

The first empathic robots and “home” voice assistants were launched, including Jibo, drones became pocket-sized, and the 3D printer was used to produce clothes and shoes.

# 2022

**VOG is born, the new range of video door phones that integrate voice and gesture commands.**

A new way of interacting with the video door phone that becomes even smarter. Offering greater security and easier management of the connected home.

**urmet**  
**85**  
**YEARS**

**Urmet celebrates 85 years in business.**

A lot of time has passed since that day in 1937 and a lot has happened, both inside the company and in the world around it. Home automation and smart solutions for everyday life are becoming more and more significant and real, and Urmet as always is focused on identifying people's needs and developing ad hoc solutions.

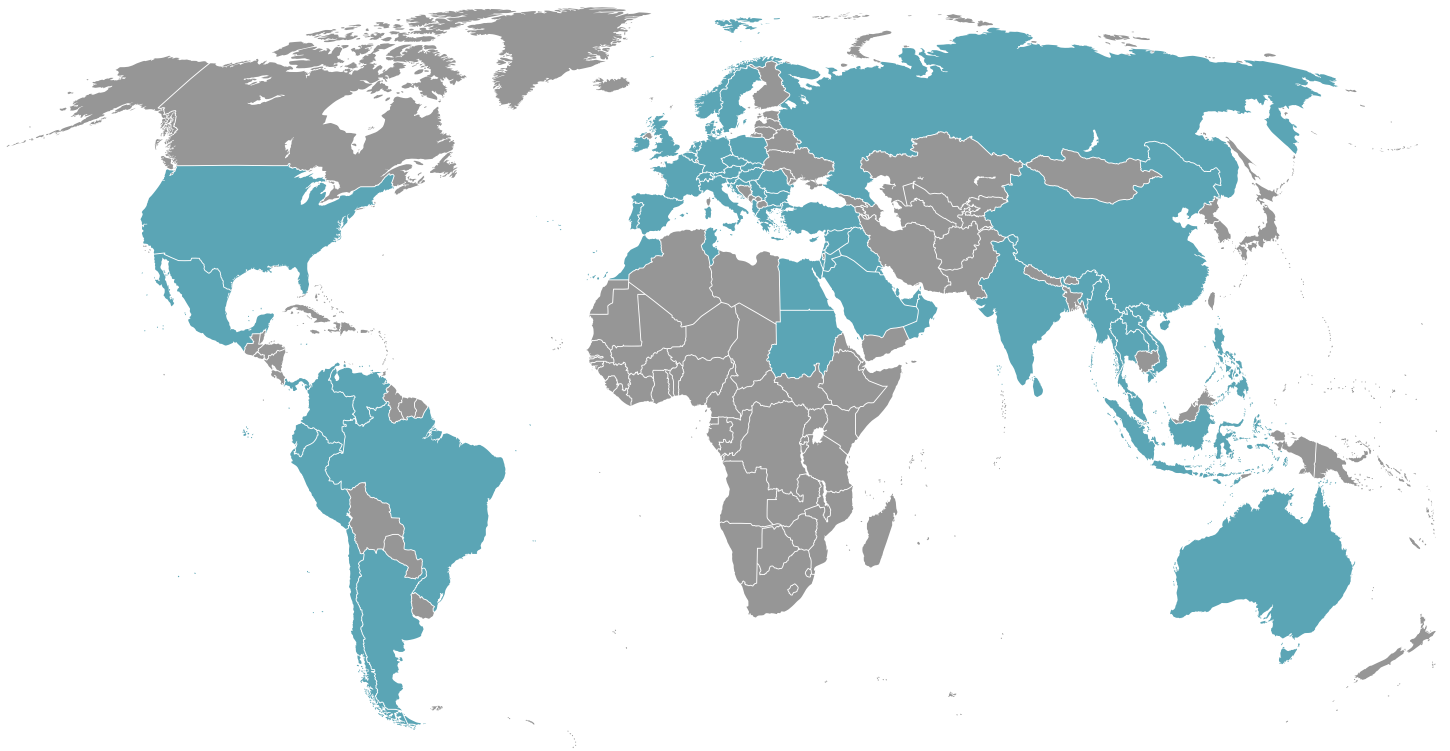

# Urmet

## in the world

Today, Urmet is an **Italian company** at the head of a **multinational group of 60** companies located all over the world. With a comprehensive catalogue of integrated home automation solutions, video intercom, professional security and access control systems.

For each sector, solutions that meet the needs of the target market, for applications in the **residential** and **vertical** sectors.

The Group is actively present in **100 countries worldwide** either directly with its own subsidiaries or through distributors and partnerships.

# URMET|GROUP

Urmet is a large family, made up of many different players who all work towards the same goal and share the same values.

VIDEO DOOR PHONE AND TELEPHONE SYSTEMS, PROFESSIONAL INTRUSION ALARM, VIDEO SURVEILLANCE AND FIRE ALARM SYSTEMS

SOLUTIONS FOR SURVEILLANCE INSTITUTES AND EMERGENCY CALLS
